

- To observe the river management strategies and understand their relationship with the surrounding environment
 - To conduct questionnaire survey
- ➤ Value:
- To aware the importance of good water quality to China and Hong Kong.

To appreciate the urban channel after revitalization

Relevance to Senior Secondary Geography Curriculum

Managing Rivers Environments: A continuing challenge

Prior knowledge

Background

Existing Kai Tak River running along Choi Hung Road starts from Po Kong Village Road, through Tung Tau Estate, Prince Edward Road East, Kai Tak Development area and finally connects to Victoria Harbour. It is one of the major drainage channels in East Kowloon area.

Kai Tak River, former called Kai Tak Nullah, experienced serious water pollution in 1960-70s. The sewage discharged from the factory and domestic sewage flowed directly into the Kai Tak Nullah, causing bad smell from the nullah.

In 2000s, the drainage capacity of Kai Tak River was inadequate to meet the current flood protection standard. Severe flooding incidents have occurred at Choi Hung Road beside Kai Tak River during heavy rains.

Therefore, the Drainage Services Department (DSD) has planned to start improvement works in 2011 in order to enhance the drainage capacity of the nullah. DSD has implemented works to rehabilitate the River and introduce aesthetic, greening, landscaping and ecological elements at the sides and bottom of the nullah. The project was completed in 2018.

Objectives of the project

- 1. Enhance drainage capacity.
- 2. Increase greening and landscape beautification facilities.
- 3. Improve community environment, link up surrounding area.

River Management Strategies

Classify the followings management strategies into hard and soft engineering.

1. Channelisation	2. Weir	3. Gabion	4. Afforestation
5. Dam	6. Concrete Frame with Soil Sacks	7. Land Use Zoning	8. Flood warning system
9. Diversion channels	10. Dykes	11. Planting at river banks	

Hard engineering : _____

Soft engineering :

STAGE 1: PLANNING AND PREPARATION

- > Key point of fieldwork: River management strategies
- Enquiry question: Study the river management strategies of urban channel and their effectiveness

When to collect the data?

Date		What factors would you consider
Time		
Season		
Precipitation three days before the fieldwork	Heavy Rained / Drizzle / No Rain	
Weather conditions		

Why do we have to pay attention to the weather condition before conducting the fieldwork?

Where to collect the data (please refers to the map on p.12)

Along Kai Tak River (AB) and Tai Shing Street to Tseuk Luk Street (XY)

What factors are considered when choosing the field site?	

Sampling

1. What sampling frame is used in the following items?	Point	Line	Grid
a) Land Use along transect XY			
b) Access the effectiveness of revitalization at			
study site P, Q, R and B			

2. Conducting questionnaire research with a few passersby you meet, which sampling method is used?

Simple random / Systematic / Purposive / Stratified / Convenience / Quota sampling

3. Completing questionnaire research with 5 residents who have lived nearby for several years, which sampling method is used?

How to collect the data ?

Research items		Primary data collection methods (check all that apply)	Required equipment / Tool (if any)
1. River Management Strategies	a. Artificial structure (e.g. channelisation, monitoring systems) b. Land use zoning		
2. Effectiveness of river revitalization	a. Drainage capacity i. river width ii. river depth		
	b. Water quality c. Ecosystem (e.g. number of fishes)		

Primary data collection methods

A. Observation	B. Measurement	C. Counting	D. Category	E. Distribution (Mapping)
F. Scoring	G. Field sketching	H. Questionnaire	I. In-depth	
			interview	

Equipment

*For reference only, the outlook may differ by brands.

STAGE 2: DATA COLLECTION

A. Location and function of different River Management Strategies

Referring to the map (p.12), which of the following management strategies can you find at location 1-7 along transect AB? Choose their major function.

River management	Function	Location on the map						
strategies	Function	1	2	3	4	5	6	7
Channelisation								
	 enhance drainage capacity 							
	 monitor water level enhance habitat 							
Checken State								
Remote Monitoring System	 enhance drainage capacity monitor water level enhance habitat 							
Box Culvert(箱形暗渠)	 enhance drainage capacity monitor water level enhance habitat 							
Benchmark (河道基準尺)	 enhance drainage capacity monitor water level enhance habitat 							
Flow Deflectors and fish								
shelters	 enhance drainage capacity monitor water level enhance habitat 							
Submerged planters	 enhance drainage capacity monitor water level enhance habitat 							

B. Land Use along the river and transect

Walk along the transect XY and classify the land use in the study area. Use the colour scheme below to show the land use distribution on the base map (p.12).

Land use*	Code	Colour
Commercial	Com	
Residential	Res	
Industrial	I	
Government/Community/Institution (G/C/I) (e.g. hospital, school, library, etc.)	G/C/I	
Recreational	Rec	
Vacant	V	
Mixed commercial and residential	Mix	
Transportation	Т	
To identify a building belonging to v	which land use, should you	

C. Drainage capacity

Measure the width of the river in the following sites with 2 different equipment and measure the water depth with lead line.

	Site	Р	Q	R	В
	Method 1: using				
	laser distance meter				
Channel width					
(m)	Method 2: using				
	measuring Tape				
	i. Actual depth				
Water depth (cm)					
,	ii. Bankfull stage				

D. Effectiveness of river revitalization

D1 Scoring

According to the following table, evaluate the effectiveness of the river revitalization.

$$\overline{}$$

	^			
Score	0	1	2	3
Clearness of the river water	Very turbid	A bit turbid	Clear	Very Clear
Bad Smell	Strong	Moderate	Slight	None
Number of fishes in water	0	1-3	4-10	11 or more
Number of birds*	0	1	2-3	4 or more
Vegetation along the river	None	Few planters	Many planters	Both trees and planters
Number of people using the sitting out area along the river	0	1-2	3-5	6 or more

*Only count the birds living in the riversides and hunt for food in the river.

Site	Р	Q	R	В	Total score of each item	Effectiveness of revitalization
Clearness of the river water					points	
Bad Smell					points	
Number of fish in water					points	
Number of birds					points	
Vegetation along the river					points	
Number of people using the sitting out area along the river					points	
Total score of each site	points	points	points	points		
Effectiveness of revitalization						

Total score of each site	Effectiveness of	Total score of each	Effectiveness of
	Tevitalization	item	Tevitalization
14 or above	Very High	10 or above	Very High
9-13	Moderate	7-9	Moderate
4-8	Low	4-6	Low
3 or below	Ineffective	3 or below	Ineffective

D2 Questionnaire Survey

Interview______residents near the river about their comments on river revitalization.

Do you live near Kai Tak River?

□ Yes □ No. (Not necessary to answer the following questions. Please search for another respondent.)

Did you live near Kai Tak River in 2016 or before?

□ Yes □ No. (Not necessary to answer the following questions. Please search for another respondent.)

The following is to understand the residents' perception of the river revitalization (after 2019). 1 is strongly disagree and 5 is strongly agree

		Strongly Disagree Stron		ongly Agree		
1	Bad smell of river has been lessened	1	2	3	4	5
2	After revitalization (2019), the surrounding environment was beautified	1	2	3	4	5
3	After revitalization (2019), the drainage improved obviously	1	2	3	4	5
4	After revitalization (2019), the number of living organisms increased obviously (more fish, birds and etc. can be seen)	1	2	3	4	5
5	After revitalization work (2019), you have always used the facilities on it (i.e. sitting out, recreation facilities and etc.)	1	2	3	4	5

6. What should other aspects be improved in Kai Tak River?

Background inform	ation of the interviewee
Sex: 🛛 Male	🗆 Female

Age Group: 11-20 21-40 41-60 61 or above

STAGE 3: DATA PROCESSING, PRESENTATION AND ANALYSIS

C. Drainage capacity

Which graph is suitable to present the change of channel width of Kai Tak River?

D1. The effectiveness of the revitalization along Kai Tak River

1. Which graph is suitable to present the differences of the effectiveness of revitalization in the four sites (P, Q, R and B)?

2. Calculate the total Score of all 4 sites (P, Q, R and B): _____, and circle the effectiveness in the table below.

Total Score	Effectiveness of the whole river session	
54 or above	Very High	
34-53	Moderate	
14-33	Low	
13 or below	Ineffective	

😻 明愛陳震夏郊野學園 Caritas Chan Chun Ha Field Studies Centre

D2 Result of Questionnaire Survey

- 1. Which graph is suitable to present the percentage of different score of each question?
 □ Bar graph □ Pie chart □ Line graph
- 2. Calculate the mean score of each question of different respondents to reflect whether the respondents agree with the effectiveness of the river revitalization.

	Question	Mean Score	Degree of recognition
1)	Bad smell had been lessened		
2)	The surrounding environment improved		
3)	The drainage improved obviously		
4)	the number of living organisms increased obviously		
5)	Citizens always use the facilities nearby		

Mean Score	Degree of recognition
1.0-1.8	Strongly Disagree
1.9-2.6	Disagree
2.7-3.4	Neither Agree or disagree
3.5-4.2	Agree
4.3-5.0	Strongly Agree

STAGE 4: INTERPRETATION AND CONCLUSION

DISCUSSION QUESTIONS

- 1. According to the locations of box culvert, why were box culverts built there?
- 2. With reference to the data collected, to what degree of effectiveness did the river revitalization enhance the habitat of Kai Tak River? Give explanation.
- 3. With reference to land use distribution of transect XY, explain whether there are land use zoning near Kai Tak River to lower the negative impacts brought by flooding?
- 4. Do you agree, "The river revitalization brings a better environment for surrounding residents"? Explain your answer with the data collected today.

STAGE 5: EVALUATION

1. We use two equipment to measure the river width. Analyze the advantages and limitations of these two equipment. Explain which one is preferable.

	Laser distance meter	Measuring Tape
Advantages		
Limitations		

- 2. Is Kai Tak River suitable for conducting river fieldwork about fluvial processes and fluvial landforms? Explain your answer.
- 3. Dose the data collected respond the enquiry question?
 - i. Analyze the drawbacks of the data collection process and how such drawbacks affect the validity and reliability of data.
 - ii. Propose ways to tackle the influences brought by the above drawbacks.

Factors affecting the data reliability and validity		Suggestion for improvement
Fieldwork date/ time		
 Fieldwork date and time representative? Any impact by today's weather condition? 		
Field site/ study area		
Field sites match with research topic?Field study area adequate?		
Location of data collection (Sampling)		
Sampling method in choosing field site		
appropriate?		
 Location of measurement representative? 		
Sample size sufficient?		
Data collection items/ methods		
 Data collection items adequate to respond 		
the enquiry questions?		
 Are the data obtained from the data 		
collection method(s) objective and without		
bias?		
 Any inadequacy about the equipment/ instruments? 		
 Measurer using the equipment/ instruments correctly? 		

4. Today, the data collected is focusing on "river management strategies". We need to have further study for a better understanding about the function of urban channel. Choose one topic about Kai Tak River and elaborate your study plan (e.g. field site / date / time / data collected / field methods / sampling methods).

HOMEWORK

After the fieldwork, please organize this fieldwork experience in field trip diary on p.13-14, as a reference for the revision of field-based question.

➢ For deeper learning or further study, I suggest modify the following aspects.

	Suggestion	(give examples)
Key point of fieldwork/ topic		
Data to be collected and method		
of data collection		
Date and time of fieldwork		
Field site		

Primary data collection methods

Data collection methods	Explanations	Examples	
A) Observation	 Using sensory observation to explore the details of research subject (people, things or environment) in a purposive and planned way. Data are recorded using text, photos, sketch, map, etc. (Refer to other data collection methods listed below) 	 Identification of surrounding environmental of a field site 	
B) Measurement	• To estimate or measure the physical quantity of the research subject. It usually requires the use of equipment or tools. Data are usually shown in certain standard, weights or measures.	• Measurement of the width of street and the building height	
C) Counting	• To record the number of occurrence of a single item.	• Statistics of pedestrian flow at the pier	
D) Category	 To classify based on the nature, characteristics and uses: to group the same or similar things; to separate different things. 	 Types of goods sold in supermarket Customers (serving local residents and tourists) of different shops 	
E) Distribution (mapping)	 To group similar things according to the research topic (similar to "D. Category"); Only suitable for spatial representation (different from category); Useful in showing the mode of occurrence of research subject in a complex environment. 	 Distribution of shops selling big fish balls in Cheung Chau 	
F) Scoring	 To quantify abstract or subjective concepts; To merge various data for easy comparison; Scoring items should include different aspects. 	 Risk index of natural hazards of Cheung Chau Air Quality Health Index (AQHI) 	
G) Field sketching	• To make simplified drawing of the field site to show what the data collectors observed. Annotations related to the research subject are added to provide key feature or additional information.	 Draw the characteristics and formation of weathering landforms 	
H) Questionnaire	 Forms: face-to-face, telephone, written, etc.; Using questionnaire to understand the opinion of research subject; Larger sample size than "I. in-depth interview"; Mainly closed questions (with options available). To obtain information which is 	 The main reasons for tourists to visit Cheung Chau The level of satisfaction among residents regarding the revitalization project 	
I) In-depth Interview	 To obtain information through face-to-face/ telephone interview; Smaller sample size than "H. Questionnaire"; Mainly open questions and forthcoming questions will change upon the answer of respondents. difficult to be obtained through observations; To understand the rationales and opinions of interviewees. 	• Opinions of District Council members on the future development of that district	

Sampling Methods

				1040		
	 Probabilistic sampling methods > Need to know the size of population; > Few differences among individuals; > Individual has equal chance of being selected; > Representativeness of data depends on sampling percentage. 		 Non-probabilistic sampling methods Size of population might not be relevant to the research objective; Chance of individual being selected is unknown; Representativeness of the results depends on the judgment of researcher in sample selection (Such as the correlation between samples and research targets). 			
Methods	Simple random Sampling (簡單隨機抽樣)	Systematic sampling (系統抽樣)	Stratified Sampling (分層抽樣)	Quota Sampling (配額抽樣/定額抽樣)	Convenience Sampling (便利抽樣/方便抽樣)	Purposive sampling (立意抽樣)
Explanations	To select sample from the whole population randomly . (using computer program, bamboo slip or random number table)	Each member of the whole population is sequentially numbered, then selected according to a <u>fixed, periodic</u> <u>interval</u> .	The whole population are classified according to the variable and divided into separate stratum. Then samples are selected randomly by proportion from each stratum.	The whole population are classified according to the variable and divided into separate stratum. Then desired number (quota) of samples are selected from each stratum.	Research subjects are selected due to convenience of recruitment.	Samples are selected according to research objectives and special requirements.
Examples	To choose a certain number of students to conduct questionnaires/ surveys according to the class number.	To measure the noise level of a street in a regular interval.	To group buildings according to their ages (e.g. above or below 50), and select a certain number of buildings in each group randomly.	To select a certain number of male and female customers, then record the amount spent in a shop.	To interview a certain number of relatives who work in mainland China To interview a certain number of passersby on the street	To conduct an in-depth interview with a district councilor about the social problems of that district.
Remarks	Suitable for small population and few variations among samples (for relevant research objectives).	Suitable for large population (hidden cyclic ordering which may affect the representativeness of data).	Effectively show the relationship / effect between variables.	Effectively show the relationship / effect of variables, but the characteristics and size of samples are judged subjectively.	Should not generalize the data to larger population	Suitable for qualitative research (data is easily influenced by the subjective judgment of researcher)
