

Changing Industrial Location of Wong Chuk Hang

Name: _____

Group: _____

Date: _____

Objectives:

- Knowledge:**
- (1) To understand the present situation of manufacturing and non-manufacturing industries in the study area
 - (2) To analyze the change of manufacturing industries and the factors affecting industrial location of Wong Chuk Hang
- Skills:**
- (1) To use appropriate sampling methods to improve the validity and reliability of data collected
 - (2) To use various fieldwork strategies to collect first-hand data e.g. land use mapping, categorizing and counting, observation and recording
 - (3) To use appropriate statistical graphs to process quantitative data
- Value:**
- (1) To cherish the advantage of industrial development between China and Hong Kong

Relevance to the DSE Geography Curriculum

- ✓ Changing Industrial Location – How and why does it change over space and time?

Prior knowledge before the fieldwork

- Please list three examples of manufacturing industries.

	Examples of manufacturing industries.	Examples of non-manufacturing industries.
1		
2		
3		

Factor of production

Compare the Hi-Tech industry and the plastic fabrication in Hong Kong

Factors	Hi-Techs	Plastic fabrication
Labour requirement	More / Less	More / Less
Land requirement	Large area / Small Area	Large area / Small Area
Capital requirement	(Relatively) Higher / Lower	(Relatively) Higher / Lower
Skill required	(Relatively) Higher / Lower	(Relatively) Higher / Lower
Locations in Hong Kong (examples)		

Temporal development of the industries

Put the number (of types of manufacturing industries of Hong Kong) below in the appropriate time frame in the table provided

- 1) Garment, 2) Textile, 3) Data centre and storage, 4) Watch and clock,
5) Multimedia production, 6) Electric car production

1980s to 1990s	2010 and onward

STAGE 1: PLANNING AND PREPARATION

Enquiry Question

1. There is more _____ land use can be found in study area of Wong Chuk Hang.
2. There is more _____ land use closer to the Wong Chuk Hang MTR station.

A) Where to go for the fieldwork

Compare the data below between 1) Wong Chuk Hang and 2) Cyber Port

	Wong Chuk Hang	Cyber Port
Year of establishment (About)	1967	2004
Distance from CDB (Central)	About 7 KM	About 8 KM
Size of the industrial area (approx. km ²)	0.2	0.24
Distance from nearest MTR station	20M from Wong Chuk Hang Station	3.8 KM from Kennedy Town Station
Number of bus routes passed by	33	6
Number of minibus routes passed by	10	5
Number of buildings (approx.)	60	2

Where are the industrial area(s) in Hong Kong?	These location(s) you suggested is/are suitable for conducting fieldwork? What are the criteria for a good field site?

B) When to conduct the fieldwork

Before the trip, suggest the differences between weekdays and weekends in the industrial area?

	Weekdays	Weekend / Holiday
Number of vehicle	More / Less	More / Less
Number of pedestrian	More / Less	More / Less
Noise level	Higher / Lower	Higher / Lower
Number of shops opened	More / Less	More / Less

Could you explain when will be an appropriate time for the industrial fieldwork (ie weekdays or weekends, day-time or night-time), in order to understand the manufacturing industries? Please specify your reason(s).

C) Sampling of the transect (Please refers to p.14 for detail)

There are more than 60 buildings in Wong Chuk Hang Industrial Area. The transect of this study will not cover all of them. Suggest appropriate sampling method with the condition suggested below

Fieldwork	Sampling Method
Select the buildings near the MTR Station	Convenience / Systematic / Purposive / Simple Random
Select a building in a three buildings interval within the study area	Convenience / Systematic / Purposive / Simple Random
Select the buildings according to a specific criteria	Convenience / Systematic / Purposive / Simple Random

D) What data to be collected?

Method for primary data collection (Please refers to p.13 for detail)

A) Observation	B) Measurement	C) Counting	D) Category	E) Distribution (mapping)
F) Scoring	G) Field sketching	H) Questionnaire	I) In-depth interview	

Research Items	Method(s) [Please fill the letter above]
What is the Land Use of buildings in the study area of Wong Chuk Hang?	
What types of economic activities related to manufacturing industries and their numbers within the industrial building in the study area of Wong Chuk Hang?	
Whether the buildings in the area are being renewed, redeveloped or revitalized?	
Other field evident (e.g. Advertisement for recruitment and property to let...)	

Explain how the following information could help you to understand the industrial activities and the locational factors of Wong Chuk Hang industrial district in the early years?

Old Newspaper

Old Maps

Other than the information above, what other information could help you understand the industrial activities and the locational factors of Wong Chuk Hang industrial district in the early years?

STAGE 2: DATA COLLECTION

1. Land use distribution

Walk along the transect and classify the land use of all buildings in the study area. Use the colour scheme below to show the land use distribution on the base map (p.17).

Land use*	Code	Colour
Commercial	Com	Red
Residential	Res	
Industrial	I	Blue
Government/Community/Institution (e.g. hospital, school, library, etc.)	G/C/I	
Recreational	Rec	
Vacant	V	
Work in progress #	WIP	
Transportation	T	Black
Mixed (Commercial and Residential)	MCR	

Indicate the future land use in the blanket representing the future land use, i.e. WIP (Com) or WIP (Res)

2. Changes in the study area

Compare the 2002 street map of Wong Chuk Hang and the current status. Record the differences in the table provided.

3. Classification and counting of manufacturing and non-manufacturing industries

Enter the lobby of selected buildings and take a photo of the directory. Classify the different types of economic activities as shown in the directory on the table listed on P.9. Calculate the number and percentages of manufacturing and non-manufacturing activities in the selected buildings.

4. Other Relevant field evidence

Please try to find and take pictures of the other relevant information

Items	Field Evidence
Recruitment advertisement what kinds of job(s) is/are hiring?	
Advertisement on the properties what are the characteristics of those properties?	
What kinds of vehicles can be found in the car park of the buildings?	
Can you see there are workmen handling freight?	
Other information Please specific (e.g. smell from the food production, noise of the machinery in the production, and etc)	

STAGE 3: DATA PROCESSING, PRESENTATION AND ANALYSIS

After collecting different types of data, what kind of chart can we use to present the following data?

Data to be present	Chart
1. Display the proportion of different land use of the transect	
2. Display the spatial distribution along the transect	
3. Display the percentage of different economic activities of selected building within study area	

1. Calculate the percentage of each type of land use on the transect XY

- Calculate the **distance percentages** of various land use of transect

Example: To calculate the distance percentage of commercial land use

Distance percentage of commercial land use

$$= \frac{\text{Length of commercial land use}}{\text{Length of transect}} \times 100\%$$

A. Draw the distance percentages in a pie chart

Distance Percentage of the land use along the transect

Type	Percentage	Colour
Commercial		Red
Residential		
Industrial		Blue
Government/Community/Institution		
Recreational		
Vacant		
Work in progress		
Transportation		
Mixed (Commercial and Residential)		

Pie chart of the distance percentage of land use along the transect

B. Land Use Transect Map (Land Use Distribution)

Draw the transect map according to the data collected

Y

Building Number	Colour	Percentage
56		3.2
55		6.5
54		3.2
53		3.2
8		3.2
7		2.7
52		3.2
51		8.6
6		2.7
5		3.2
50		3.2
49		2.7
48		2.2
47		3.2
46		2.2
45		2.7
	WIP	2.7
4		2.2
3		5.4
38		3.2
37		3.2
36		3.2
2		3.2
35		3.2
34		5.9
33		3
32		2.4

X

Type	%	Colour
Commercial		Red
Residential		
Industrial		Blue
Government/ Community /Institution		
Recreational		
Vacant		
Work in progress		
Transportation	7.1	
Mixed (Commercial and Residential)		

2. With reference to the classification scheme below, display the proportion of manufacturing and non-manufacturing activities of the selected buildings on stacked bar graph (P.10)

Calculate the percentage of economic activities of selected building

$$= \frac{\text{Number of economic activities of selected industry}}{\text{Total number of economic activities in the selected building}} \times 100\%$$

Name of building: _____

Floors to be examine: _____ **OR** **Types of economic activities to be examine:** _____

	Types of economic activities	Number of companies engaging similar business	% of total	Colour
Manufacturing	1. Printing and printing-related industries/ Manufacturing of paper and paper products			
	2. Other manufacturing (e.g. plastic products/ glass fibre products/ metal products/ electronic components/ machinery and instrument/ jewelry/ stationery/ pharmaceuticals, food processing)			
Non-manufacturing	3. Trading (e.g. : XX 實業、XX 洋行)			
	4. Storage (e.g. mini storage)			
	5. Art and education (e.g. gallery, studio, education centre)			
	6. Business Services and Other non-manufacturing activities (e.g. retail sale, catering, advertising, design services, professional services, property management)			
Vacant				
Unable to identify				
		Total no. of companies: _____	100%	

DATA PROCESSING – Types of economic activities in Wong Chuk Hang

Group: _____
 Use the stacked bar graph below to display the data from p.9

Manufacturing		Non-manufacturing				Vavcant	Unable to identify
Printing / Manufacture paper (products) 	Other manufacturing 	Trading 	Storage 	Art & education 	Other non-manufacturing 		

STAGE 4: DATA INTERPRETATION (DISCUSSION QUESTIONS)

1. Explain whether your hypothesis in P.3 is valid or not. Compare the percentage of industrial and commercial land use within the study area and discuss the reasons for the changes.
2. Referring to P.9 the economic activities of selected buildings and the stacked bar graph on p.10, analyze the following phenomena.
 - i) What types of manufacturing industries are still locating in the building? Explain the reason.
 - ii) What types of non- manufacturing industries are still locating in the building? Explain why these non- manufacturing industries reside in the industrial building and occupy the former industrial spaces.
3. Referring to the (land use) changes between (map of) 2002 and today's data. Explain the reason of redevelopment and revitalization can be found in the study area?
4. Discuss the impacts of the development of South Island Line, which opened almost ten years ago, on the future economic activities in Wong Chuk Hang for the coming five years.

	Positive impacts	Negative impacts
i) Industrial activities		
ii) Commercial activities		

STAGE 5: EVALUATION

- Other than the data collected during the fieldwork, suggest other **(a) primary and (b) secondary data and information** necessary to enrich the present study.
- Please use the table below to suggest the factors affecting the data reliability and validity, as well as the suggestion for improvement.

Factors affecting the data reliability and validity		Suggestion for improvement
Fieldwork date/ time - Fieldwork date and time representative? - Any impact by today's weather condition?		
Field site/ study area - Field sites match with research topic? - Field study area adequate?		
Location of data collection (Sampling) - Sampling method in choosing field site appropriate? - Location of measurement representative? - Sample size sufficient?		
Data collection items/ methods - Data collection items adequate to respond the enquiry questions? - Are the data obtained from the data collection method(s) objective and without bias? - Any inadequacy about the equipment/ instruments? - Measurer using the equipment/ instruments correctly?		

Further study:

Within the study area, propose an additional research to investigate the impact of industrial activities on the surrounding environment, for example air quality, noise levels, water quality and etc. Your detailed research plan should specify the necessary instruments and measurement locations.

Homework:

After the fieldwork, please organize this fieldwork experience in field trip diary on p.15-16, as a reference for the revision of field-based question.

Primary data collection methods

Data collection methods	Explanations		Examples
A) Observation	To explore the details of research subject (people, things or environment) in a purposive and planned way, and usually record what you see with text, photos, sketch, maps. (Refer to other data collection methods listed below)		Identification of surrounding environmental of a field site
B) Measurement	To estimate or measure the physical quantity of the research subject. It usually requires the application of equipment or tools and data usually shown in certain standard or weights and measures.		Measurement of the width of street and the building height
C) Counting	To record the number of occurrence of a single item.		Statistics of pedestrian flow at the pier
D) Category	- To classify based on the nature, characteristics and uses: - to group the same or similar things; - to separate different things.		- Types of goods sold in supermarket - Customers (serving local residents and tourists) of different shops
E) Distribution (mapping)	- To group similar things according to the research topic (similar to “D. Category”); - Only suitable for spatial representation (different from category); - Useful in showing the mode of occurrence of research subject in a complex environment.		Distribution of shops selling big fish balls in Cheung Chau
F) Scoring	- To quantify abstract or subjective concepts; - To merge various data for easy comparison; - Scoring items should include different aspects.		- Risk index of Cheung Chau to natural hazards - Air Quality Health Index (AQHI)
G) Field sketching	To draw directly at the field site to show what the data collectors looking at. Annotations related to the research subject are added to provide additional information.		Draw the characteristics and formation of weathering landforms
H) Questionnaire	- Forms: face-to-face, telephone, written, etc.; - Using questionnaire to understand the opinion of research subject; - Larger sample size than “I. in-depth interview”; - Mainly closed questions (with options available).	- To collect information by questioning; - To obtain information which is difficult to be obtained through observations; - To understand the rationales and opinions of interviewees.	- The major reasons for tourists to visit Cheung Chau - The level of satisfaction among residents regarding the revitalization project
I) In-depth Interview	- To obtain information through face-to-face/ telephone interview; - Smaller sample size than “H.Questionnaire”; - Mainly open questions and forthcoming questions will change upon the answer of respondents.		Opinions of District Council members on the future development of that district

Sampling Methods

Probabilistic sampling methods <i>➤ Need to know the size of population; ➤ Few differences among individuals; ➤ Individual has equal chance of being selected; ➤ Representativeness of data depends on sampling percentage.</i>				Non-probabilistic sampling methods <i>➤ Size of population might not be relevant to the research objective; ➤ Chance of individual being selected is unknown; ➤ Representativeness of the results depends on the judgment of researcher in sample selection (Such as the correlation between samples and research targets).</i>		
Sampling methods	Simple random sampling (簡單隨機抽樣)	Systematic sampling (系統抽樣)	Stratified Sampling (分層抽樣)	Quota Sampling (配額抽樣/ 定額抽樣)	Convenience Sampling (便利抽樣/ 方便抽樣)	Purposive sampling (立意抽樣)
Explanations	To select sample from the <u>whole population randomly</u> . (using computer program, bamboo slip or random number table)	Each member of the whole population is sequentially numbered, then selected according to a <u>fixed, periodic interval</u> .	The whole population are classified according to the variable and divided into separate stratum. Then samples are selected randomly by proportion from each stratum.	The whole population are classified according to the variable and divided into separate stratum. Then desired number (quota) of samples are selected from each stratum.	Research subjects are selected due to convenience of recruitment.	Samples are selected according to research objectives and special requirements.
Examples	To choose a certain number of students to conduct questionnaires/ surveys according to the class number.	To measure the noise level of a street in a regular interval.	To group buildings according to their ages (e.g. above or below 50), and select a certain number of buildings in each group randomly.	To select a certain number of male and female customers, then record the amount spent in a shop.	To interview a certain number of relatives who work in mainland China To interview a certain number of passers-by on the street	To conduct an in-depth interview with a district councillor about the social problems of that district.
Remarks	Suitable for small population and few variations among samples (for relevant research objectives).	Suitable for large population (hidden cyclic ordering which may affect the representativeness of data).	Effectively show the relationship / effect between variables.	Effectively show the relationship / effect of variables, but the characteristics and size of samples are judged subjectively.	Should not generalize the data to larger population	Suitable for qualitative research (data is easily influenced by the subjective judgment of researcher)

My Field Trip Diary

➤ Related modules: Changing Industrial Location – How and why does it change over space and time?

➤ Key point of fieldwork/topic: _____

▪ Date: _____ (Weekday/ Public holiday) ▪ Time: _____ ▪ Field site: _____	▪ Weather conditions:
Is the above planning appropriate for the fieldwork?	

➤ Primary data:

Data collection method	Data collected	Equipment/ Material (if any)	Merits☺/Demerits☹ of the data collection method (give examples)	Suggestion for improvement (give explanations)

➤ Secondary data:

Data collected	Use	Data obtained from
Apart from the above, what other secondary data could be used for further investigation?		

➤ Sampling method (if any):

Sampling method	Applied in the following	Merits😊/ Demerits😞

➤ Data processing and presentation:

Type of graph/ chart	Content shown and function of graph/chart	Merit😊/ Limitation😞

➤ For deeper learning or further study, I suggest modify the following aspects.

		Suggestion (give examples)
☐	Key point of fieldwork/ topic	
☐	Data to be collected and method of data collection	
☐	Date and time of fieldwork	
☐	Field site
